MUNKHTENGER ENKHBOLD

Arlington, VA | 571-726-1282 | munkhtengery@gmail.com | github.com/munkhtenger0 | munkhtenger0.github.io

SUMMARY

Data analyst with 3 years of Big 4 audit experience and an M.S. in Data Analytics. Strong in SQL, Power BI, Tableau, and Python, with a focus on data quality and reporting that leaders can trust.

TECHNICAL SKILLS

SQL: joins, CTEs, window functions, subqueries
Visualization and BI: Power BI, Tableau, Excel dashboards, KPI and executive reporting
Python: pandas, numpy, matplotlib, Jupyter
Data Quality: data cleaning, validation, QA, API based data pipelines
Excel and Statistics: pivot tables, XLOOKUP, hypothesis testing, regression
Tools: Git/GitHub, VS Code
Domain: financial statements, audit methodology, risk and KPI reporting

EDUCATION

M.S. in Data Analytics, Business Analytics Concentration *Expected Dec 2027*
University of the Potomac, Washington, DC

B.S. in Financial Administration *Jun 2022*
University of Finance and Economics, Mongolia

EXPERIENCE

Assurance Senior Associate | Ernst & Young (EY) *Sep 2022 to Dec 2025*

- Audited major institutional clients, including the Development Bank of Mongolia and Mongolian Mining Corporation, across banking, infrastructure, and insurance engagements
- Built Power BI and Tableau dashboards tracking KPIs across 3+ concurrent audit engagements, giving leadership live visibility into status and risk areas
- Ran QA reviews on client datasets before delivery, catching inconsistencies before they reached final audit reports

Finance Intern | Mongolian Mortgage Corporation *Jun 2022 to Sep 2022*

- Tracked loan portfolio metrics and helped prepare management reports on repayment trends

PROJECTS

Forensic Financial Analytics | github.com/munkhtenger0/forensic-financial-analytics

- Built a Python pipeline pulling live SEC EDGAR data to score earnings manipulation risk with the Beneish M-Score across 21 public companies
- Flagged 4 of 21 companies above the standard risk threshold and traced Nvidia's score to legitimate hypergrowth, showing why model output needs analyst judgment

Arlington County Crash Analysis | github.com/munkhtenger0/arlington-crash-analysis

- Analyzed 1,200 crash records (2019 to 2023), modeled on Arlington County Vision Zero statistics, using Python, pandas, and matplotlib
- Found that 5pm to 6pm is the peak crash hour (10% of crashes), serious injury or fatal crashes make up about 9%, and 30% involve a pedestrian or cyclist
